## Aristotle (384–322 BCE)

Aristotle, one of the greatest philosophers of ancient Greece, was born in **Stagira**, a city in Macedonia. His father, Nicomachus, was the physician to the Macedonian king, which gave Aristotle access to the royal court and early exposure to scientific ideas.

### Education and Early Life

At the age of 17, Aristotle moved to Athens to study at Plato's Academy, where he spent nearly 20 years as a student and later a teacher. Despite being Plato's most renowned pupil, Aristotle eventually diverged from many of Plato's ideas, particularly on metaphysics and the nature of reality.

### Career and Contributions

After Plato's death in 347 BCE, Aristotle traveled extensively, tutoring various individuals, including Alexander the Great. Around 335 BCE, he founded the **Lyceum** in Athens, a school dedicated to research and teaching in philosophy, science, and politics. His method of study, based on empirical observation and logical reasoning, laid the foundation for many fields of modern science and philosophy.

### Major Contributions

**Logic:** Developed the syllogistic method, foundational for formal logic.

**Ethics and Politics:** Introduced ideas of virtue ethics and the classification of government systems.

**Literary Criticism:** Authored *Poetics*, analyzing drama and tragedy.

### Death

Aristotle died in **322 BCE** in Euboea, Greece, at the age of **62**, reportedly due to natural causes. His work influenced countless thinkers and remains foundational in Western thought to this day.
